📄 PROFILE

I am a motivated and ambitious software engineering student at Bahria University. Currently pursuing a Bachelor’s degree in Software Engineering, proficient in HTML, CSS, Bootstrap, Tailwind CSS, JavaScript, ReactJS, NodeJS, Asp.net, C#, Java, MongoDB, and SQL. I aim to use my expertise to contribute effectively in a professional setting

📁 PROJECTS

- Banking System,** (JAVA (Desktop Application) and MySQL) 🔗
 - Developed a Java-based desktop banking application for my 2nd-semester project that simulates standard banking operations.
 - Implemented the Twilio API to send One-Time Passwords (OTPs) via email, ensuring a secure and efficient password recovery process.
 - Utilized Java for the desktop application, ensuring a user-friendly interface and smooth banking operations.
- Password Management System,** (C# (Desktop Application) and MySQL) 🔗
 - Developed a secure Password Management System using advanced algorithms in my 3rd semester.
 - Implemented Huffman for file compression and SHA56 hashing for secure password management.
- Airline Reservation System,** (C# (Desktop Application) and SQL) 🔗
 - Developed a desktop application for the 4th semester project, simulating an airline reservation system. The application includes features like ticket reservation, seat selection, and ticket issuance via email.
 - Implemented a seamless reservation process allowing users to book tickets and select seats through the desktop application. This enhances the overall user experience.
 - Incorporated a robust security feature for password recovery, allowing users to reset passwords by validating an OTP sent via email for a secure and user-friendly airline reservation app.
- Ecommerce Web App,** (ReactJS,Asp.net and SQL) 🔗
 - Utilized technologies including React.js, Asp.net, SQL, React Redux Toolkit for state management, and RESTful APIs (Axios) for a scalable and efficient architecture.
 - Implemented buyer, seller, and admin functionalities, ensuring seamless interactions, transactions, and efficient management.
 - User-friendly interfaces, secure authentication, and efficient data management ensure a smooth and protected experience for all users.
- Weather App,** (NextJS,Redux) 🔗
 - Intuitive interface enabling users to effortlessly input location details for accurate weather forecasts.
 - Crafted with Tailwind CSS for a sleek, modern interface that adapts seamlessly to various devices.
 - Utilizes a weather API to dynamically fetch and display up-to-date weather information.
- 📜 CERTIFICATES
- The Complete 2024 Web Development Bootcamp -Udemy 🔗
 - C#(Basics) 🔗
 - SQL (Basics) 🔗
 - JavaScript & jQuery - Udemy 🔗
 - HTML5 - From Basics to Advanced level 🔗
 - Learn MySQL - For Beginners 🔗
 - Python for beginners - Udemy 🔗
